# Is it enough to communicate the model in a paper?

Traditional method of dissemination in the recent past

Problems:

- Errors in printing
- Missing information
- Dependencies on implementation
- Outright errors
- Larger model  
⇒ more time & effort

Fig. 2. The full IPR model. R, receptor; O, open; A, activated; S, shut; I, inactivated.  $c$  is  $[Ca^{2+}]$ ;  $p$  is  $[IP_3]$ .

also has  $IP_3$  and one other  $Ca^{2+}$  ion bound. For simplicity, we assume that the rate of  $Ca^{2+}$  binding to the inactivating site is independent of whether  $IP_3$  is bound, or whether the receptor has been activated by  $Ca^{2+}$  (but see ref. 19 and later discussion). The  $\bar{R}$ ,  $\bar{R}$ ,  $\bar{O}$  triangle models  $Ca^{2+}$ -dependent binding of  $IP_3$ ;  $Ca^{2+}$  modulates the interconversion of the receptor between two states, each of which can bind  $IP_3$  with different kinetics. In type-3 IPR,  $Ca^{2+}$  enhances  $IP_3$  binding but inhibits  $IP_3$  binding in type-1 IPR (20–22). The reaction scheme shown here incorporates either possibility, depending on the parameter values. As we shall see, our model predicts that  $Ca^{2+}$  increases the rate of  $IP_3$  binding to type-2 IPR.

To derive the model equations, we first define  $K_i = k_{-i}/k_i$  and  $L_i = l_{-i}/l_i$  for every appropriate integer  $i$ . We also let  $c$  and

$p$  denote  $[Ca^{2+}]$  and  $[IP_3]$ , respectively. Then, assuming that the transitions  $\bar{R} \rightleftharpoons R$ ,  $\bar{O} \rightleftharpoons O$ ,  $\bar{A} \rightleftharpoons A$  and  $\bar{R} \rightleftharpoons R'$  are fast and in instantaneous equilibrium, we get  $c\bar{R} = L_3\bar{R}$ ,  $c\bar{R} = L_1R$ ,  $c\bar{O} = L_5\bar{O}$ , and  $c\bar{A} = L_1\bar{A}$ . We now define the new variables  $R = \bar{R} + R + R'$ ,  $O = \bar{O} + O$ ,  $A = \bar{A} + A$ . Then

$$\frac{dR}{dt} = \phi_{-2}O - \phi_2pR + (k_{-1} + l_{-2})I_1 - \phi_1R,$$

$$\frac{dO}{dt} = \phi_2pR - (\phi_{-2} + \phi_4 + \phi_3)O + \phi_{-4}A + k_{-3}S,$$

$$\frac{dA}{dt} = \phi_4O - \phi_{-4}A - \phi_5A + (k_{-1} + l_{-2})I_2,$$

$$\frac{dI_1}{dt} = \phi_1R - (k_{-1} + l_{-2})I_1,$$

$$\frac{dI_2}{dt} = \phi_5A - (k_{-1} + l_{-2})I_2,$$

where

$$\phi_1(c) = \frac{(k_1L_1 + l_2)c}{L_1 + c(1 + L_1/L_3)},$$

$$\phi_2(c) = \frac{k_2L_3 + l_4c}{L_3 + c(1 + L_3/L_1)},$$

$$\phi_{-2}(c) = \frac{k_{-2} + l_{-4}c}{1 + c/L_5},$$

$$\phi_3(c) = \frac{k_3L_5}{L_5 + c},$$

$$\phi_4(c) = \frac{(k_4L_5 + l_6)c}{L_5 + c},$$

$$\phi_{-4}(c) = \frac{L_1(k_{-4} + l_{-6})}{L_1 + c},$$

$$\phi_5(c) = \frac{(k_1L_1 + l_2)c}{L_1 + c},$$

and where  $R + O + A + S + I_1 + I_2 = 1$ . Thus, given the fast equilibria above, Fig. 2 is equivalent to Fig. 3.

The model assumes that the binding of  $IP_3$  and  $Ca^{2+}$  is sequential, not independent. So, for instance,  $Ca^{2+}$  can bind

# Is it enough to make your (software X) code available?

It's vital for good science:

- Someone with access to the same software can try to run it, understand it, verify the computational results, build on them, etc.
- Opinion: you should **always do this** in any case

# Is it enough to make your (software X) code available?

It's vital for good science—

- Someone with access to the same software can try to run it, understand it, verify the computational results, build on them, etc.
- Opinion: you should **always do this** in any case

But it's still not ideal for communication of scientific results:

- **Doesn't necessarily encode biological semantics of the model**
- What if they don't have access to the same software?
- What if they don't want to use that software?
- What if they want to use a different conceptual framework?
- And how will people be able to relate the model to other work?

**Different tools  $\Rightarrow$  different interfaces & languages**

General background and motivations

# SBML: a lingua franca for software

BioModels Database - A Database of Annotated Published Models

BioModels Database is a repository of peer-reviewed, published, computational models. These mathematical models are primarily from the field of systems biology, but more generally are those of biological interest. This resource allows biologists to store, search and retrieve published mathematical models. In addition, models in the database can be used to generate sub-models, can be simulated online, and can be converted between different representational formats. This resource also features programmatic access via Web Services.

All unmodified models in the database are available freely for use and distribution, to all users. This resource is developed and maintained by the [BioModels.net](http://www.biomodels.net) initiative. More information about BioModels Database can be found in the [Frequently Asked Questions](#).

# SBML = Systems Biology Markup Language

**Format** for **representing** computational models of biological processes

- Data structures + usage principles + serialization to XML
- (Mostly) Declarative, not procedural—not a scripting language

**Neutral** with respect to modeling framework

- E.g., ODE, stochastic systems, etc.

Important: **software** reads/writes SBML, **not humans**

# The raw SBML (as XML)

```

</listOfReactions>
```

The process is central

- Literally called a “**reaction**” in SBML
- Participants are pools of entities (biochemical **species**)

⋮

Models can further include:

- **Compartments**
- Other constants & variables
- Discontinuous **events**
- **Other, explicit math**
- Unit definitions
- Annotations

**Core SBML concepts are fairly simple**

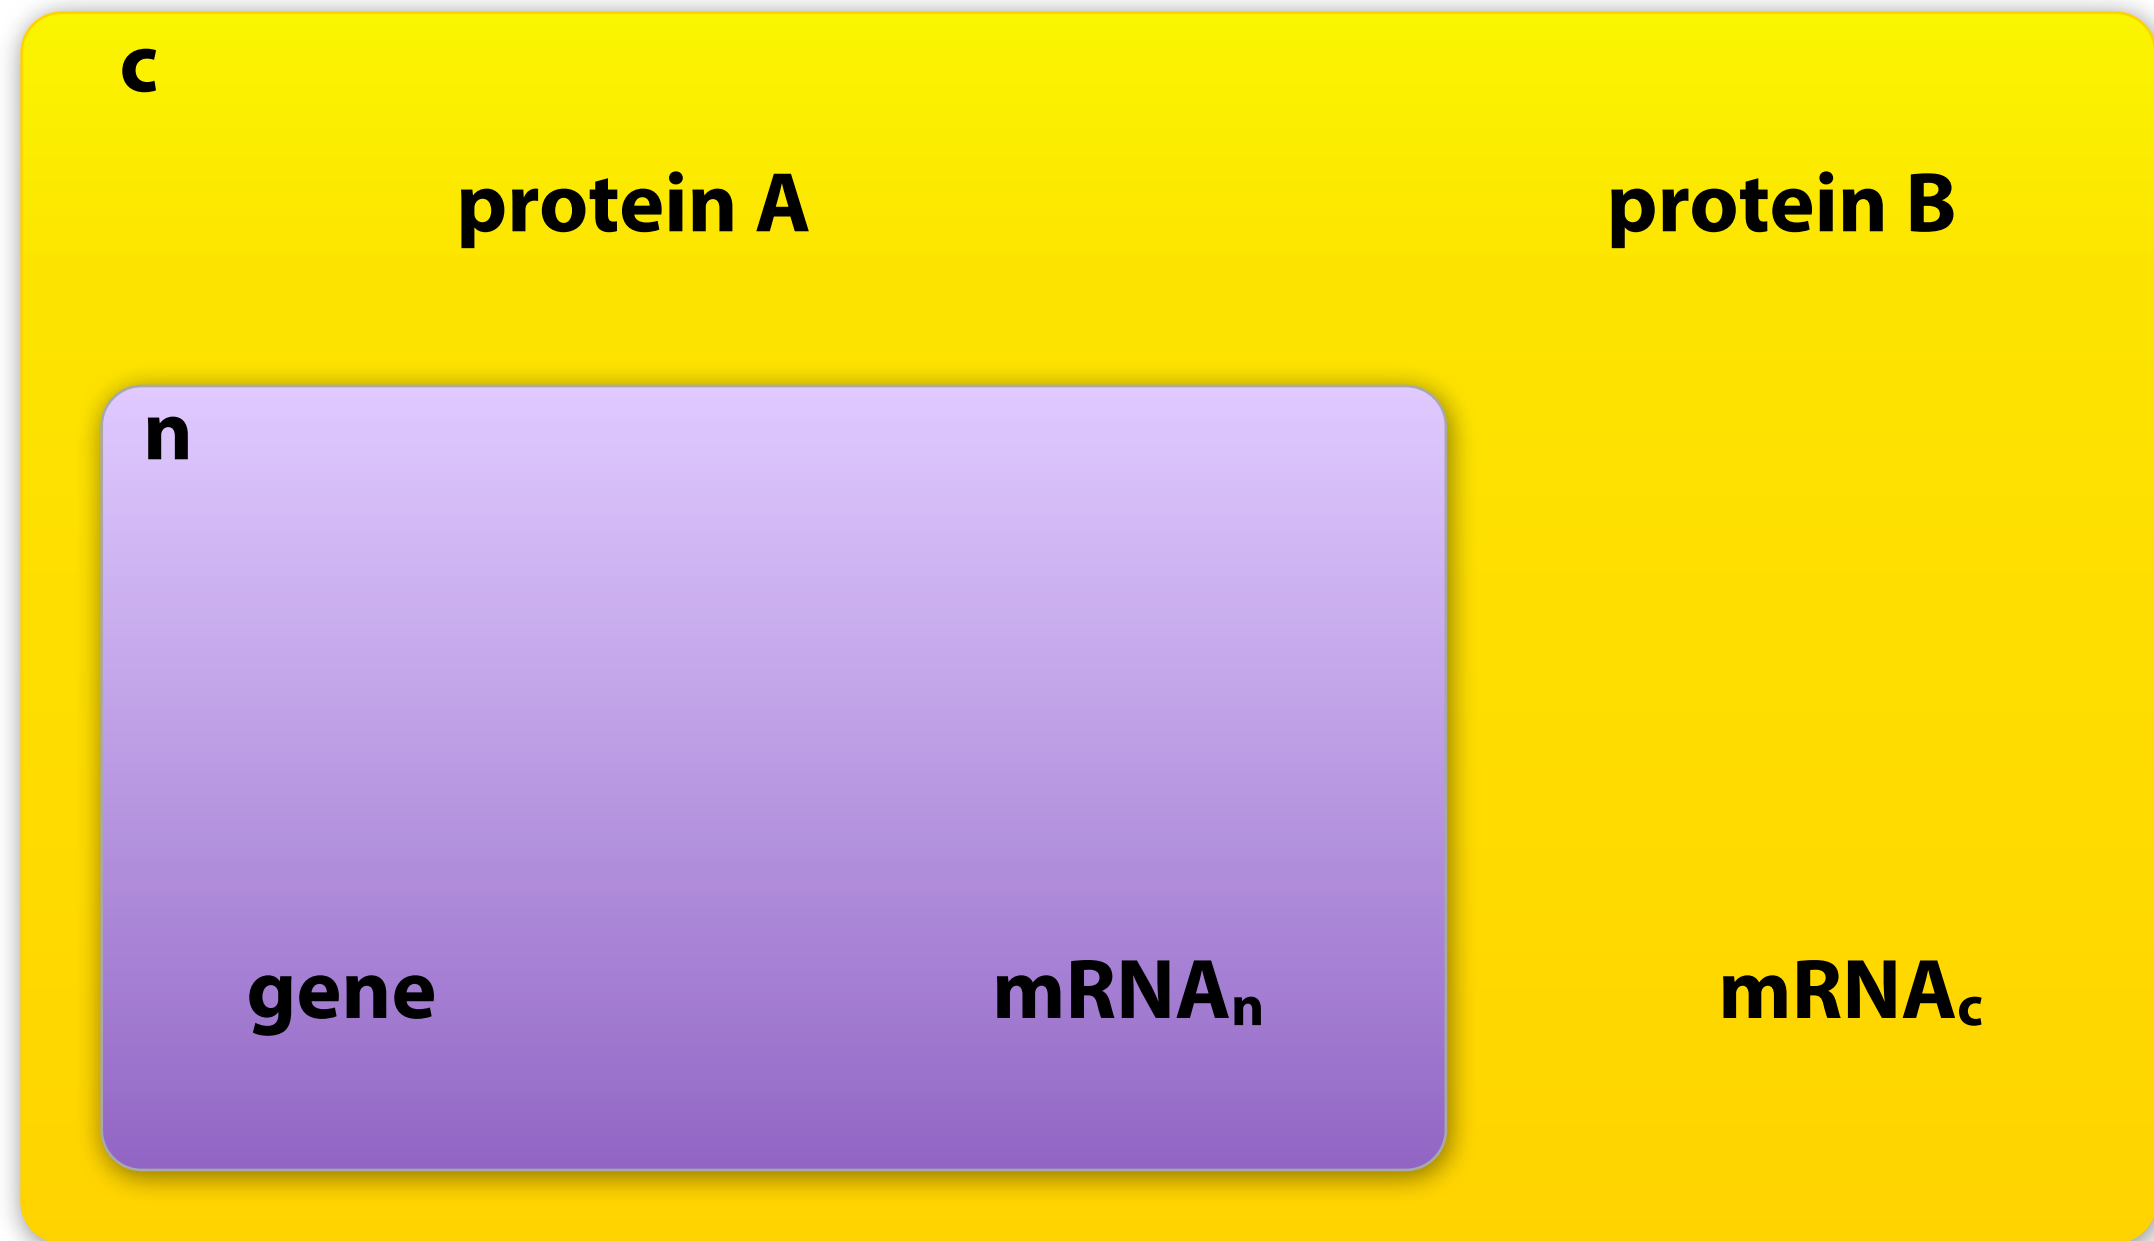

# Some basics of SBML core model encoding

Well-stirred compartments

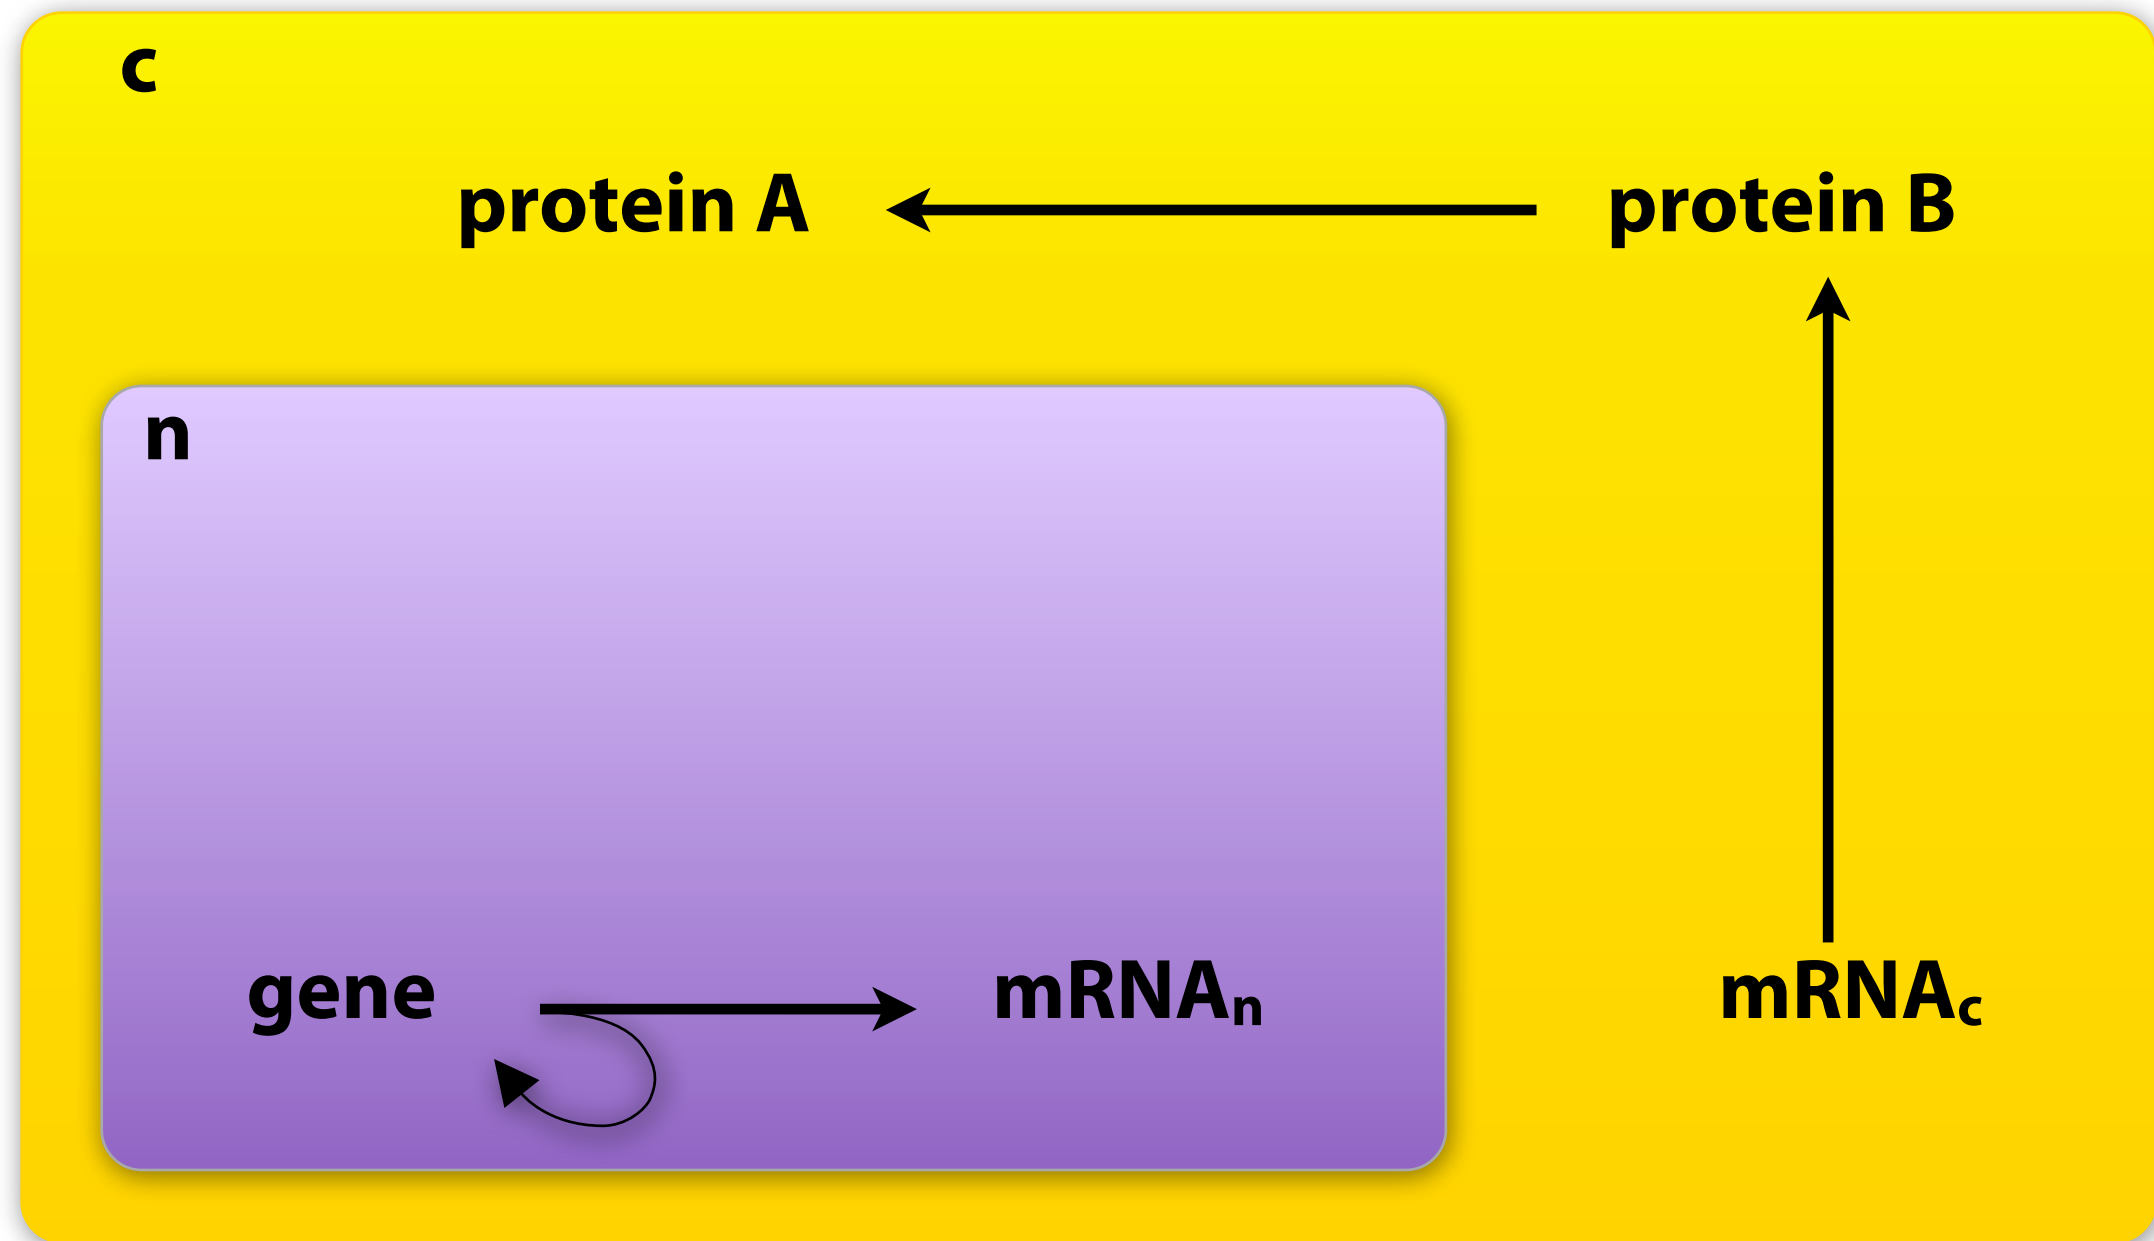

Species pools are located in compartments

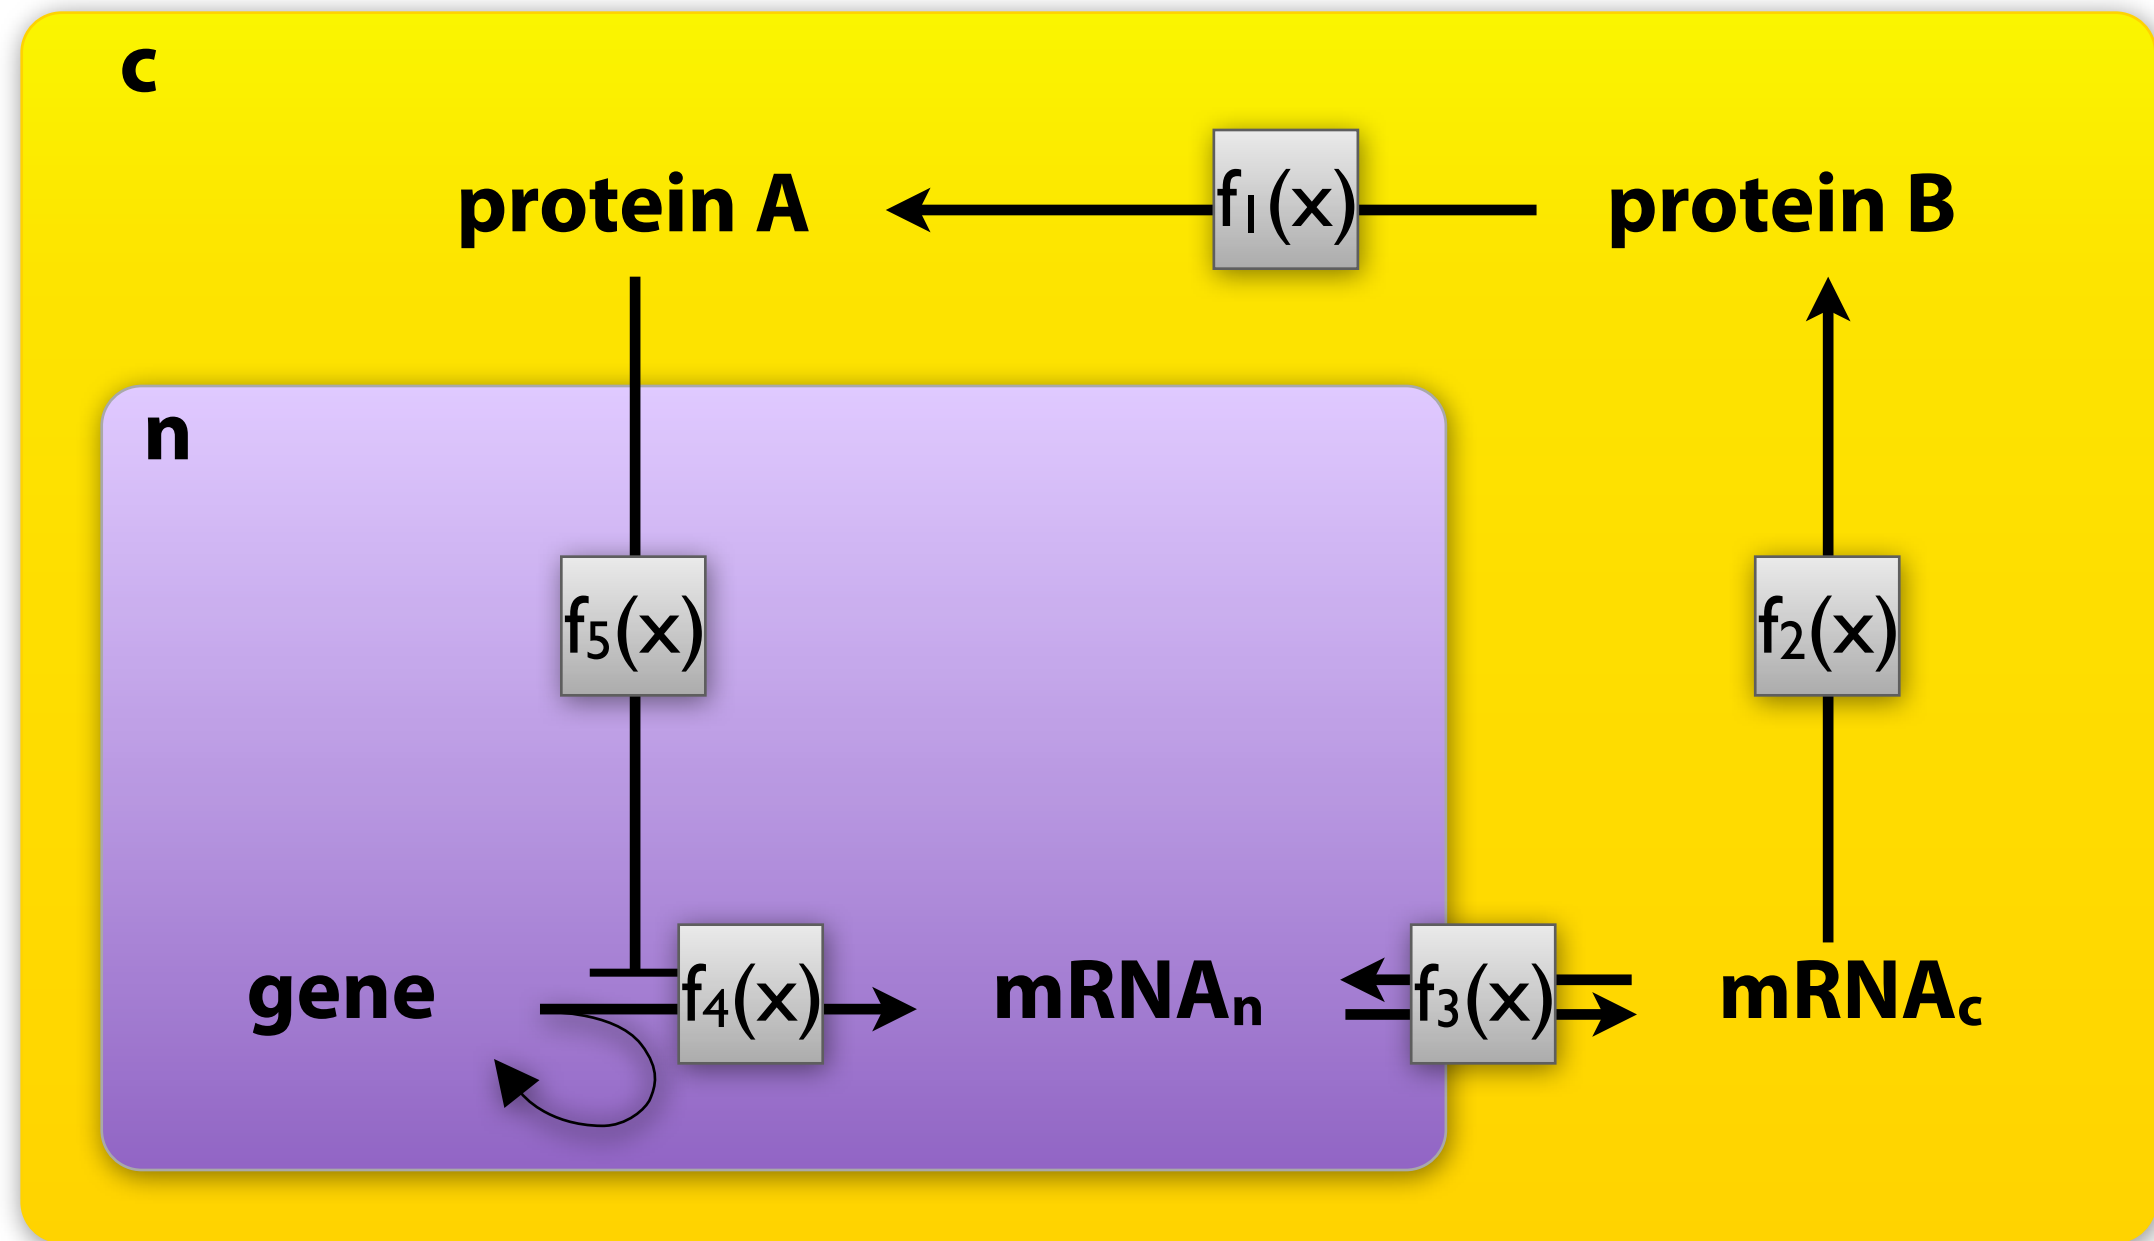

Reactions can involve any species anywhere

Reactions can cross compartment boundaries

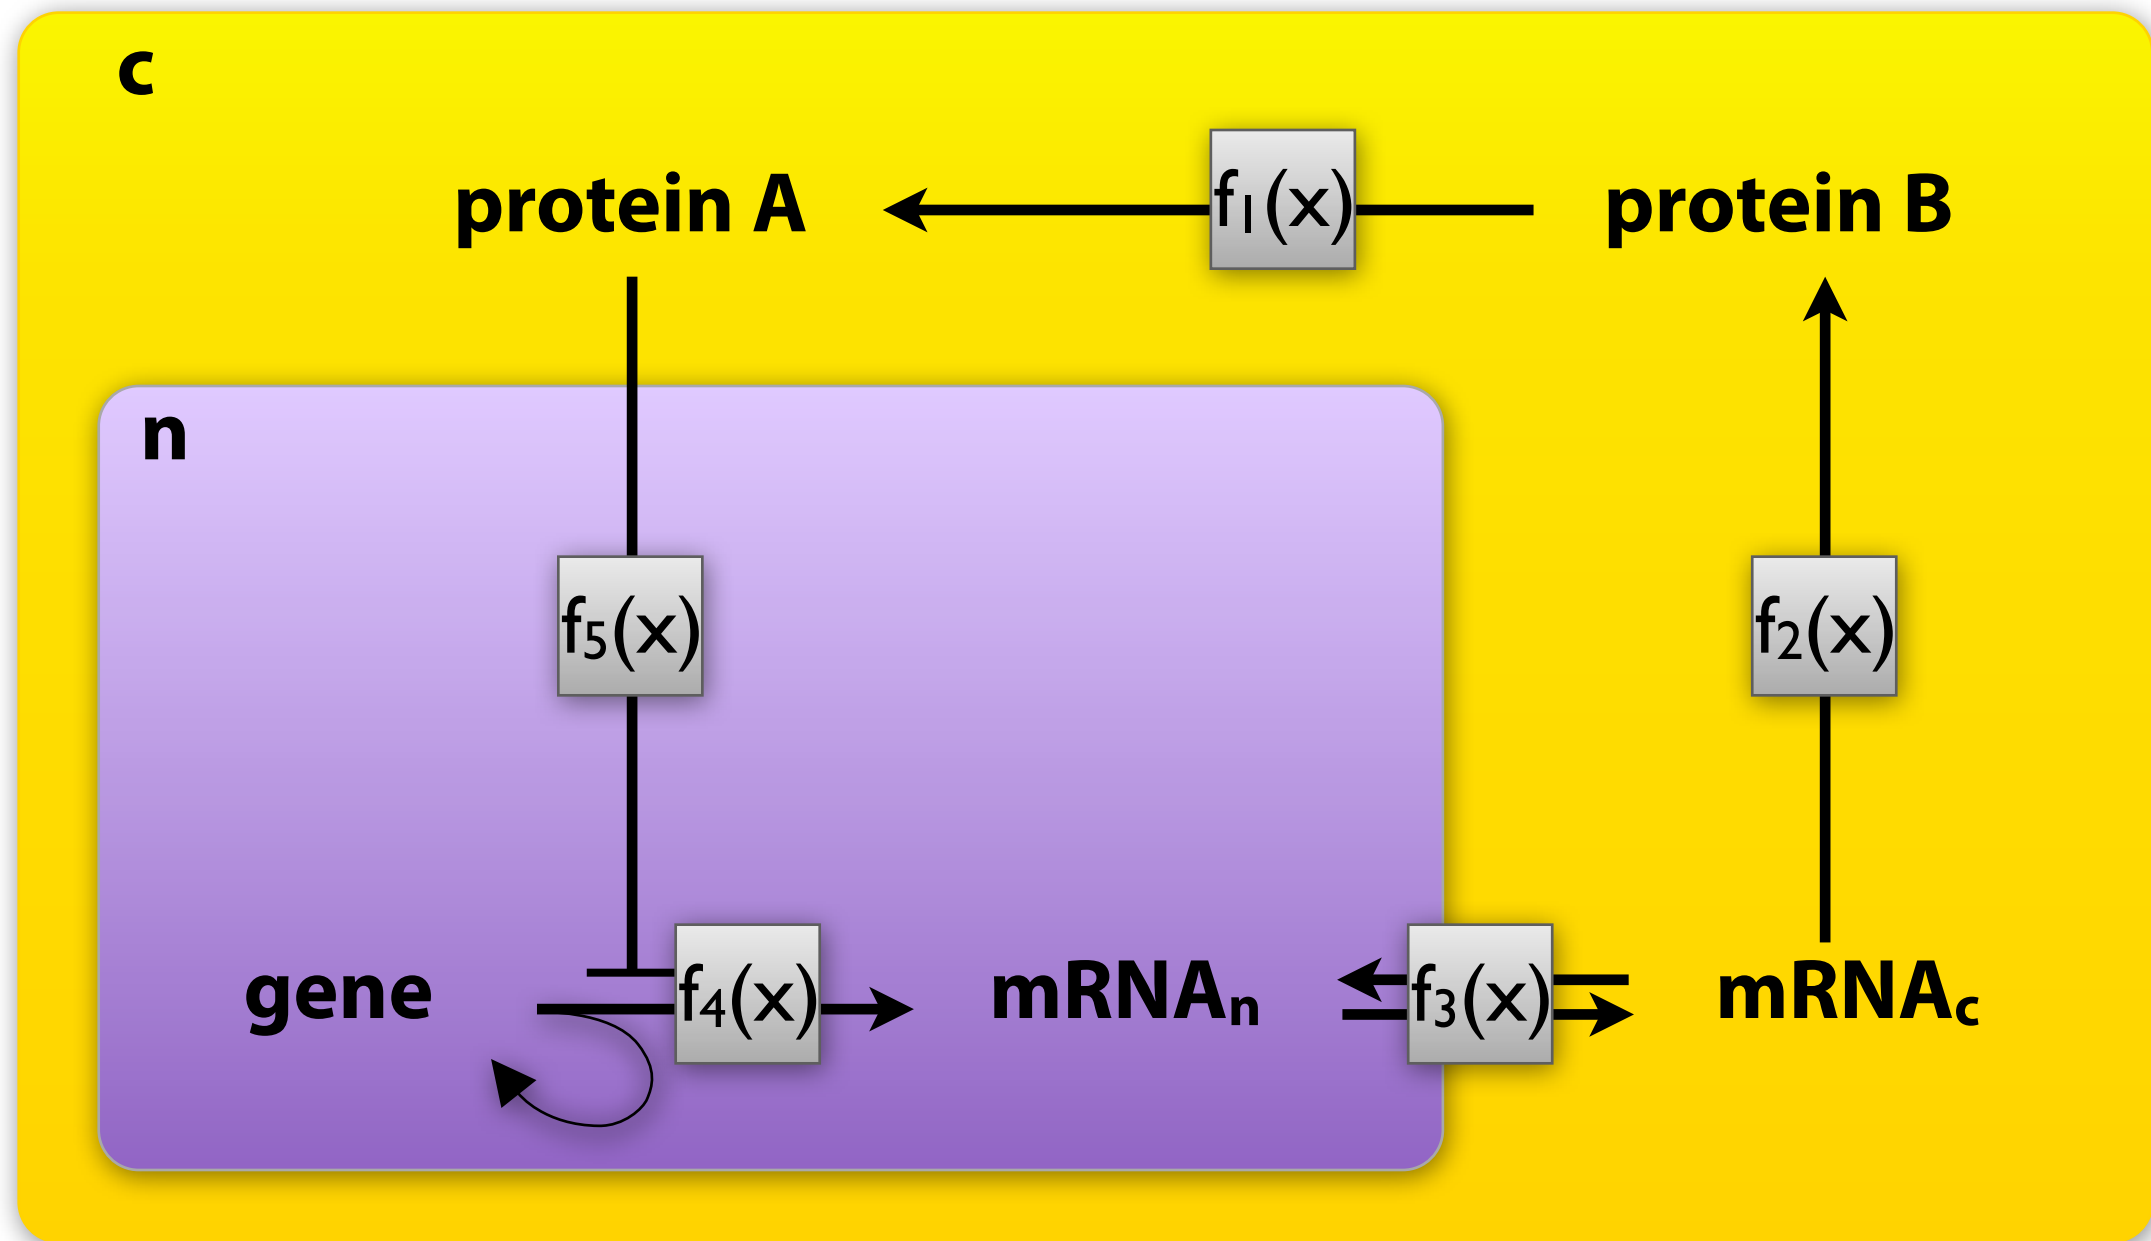

Reaction/process rates can be (almost) arbitrary formulas

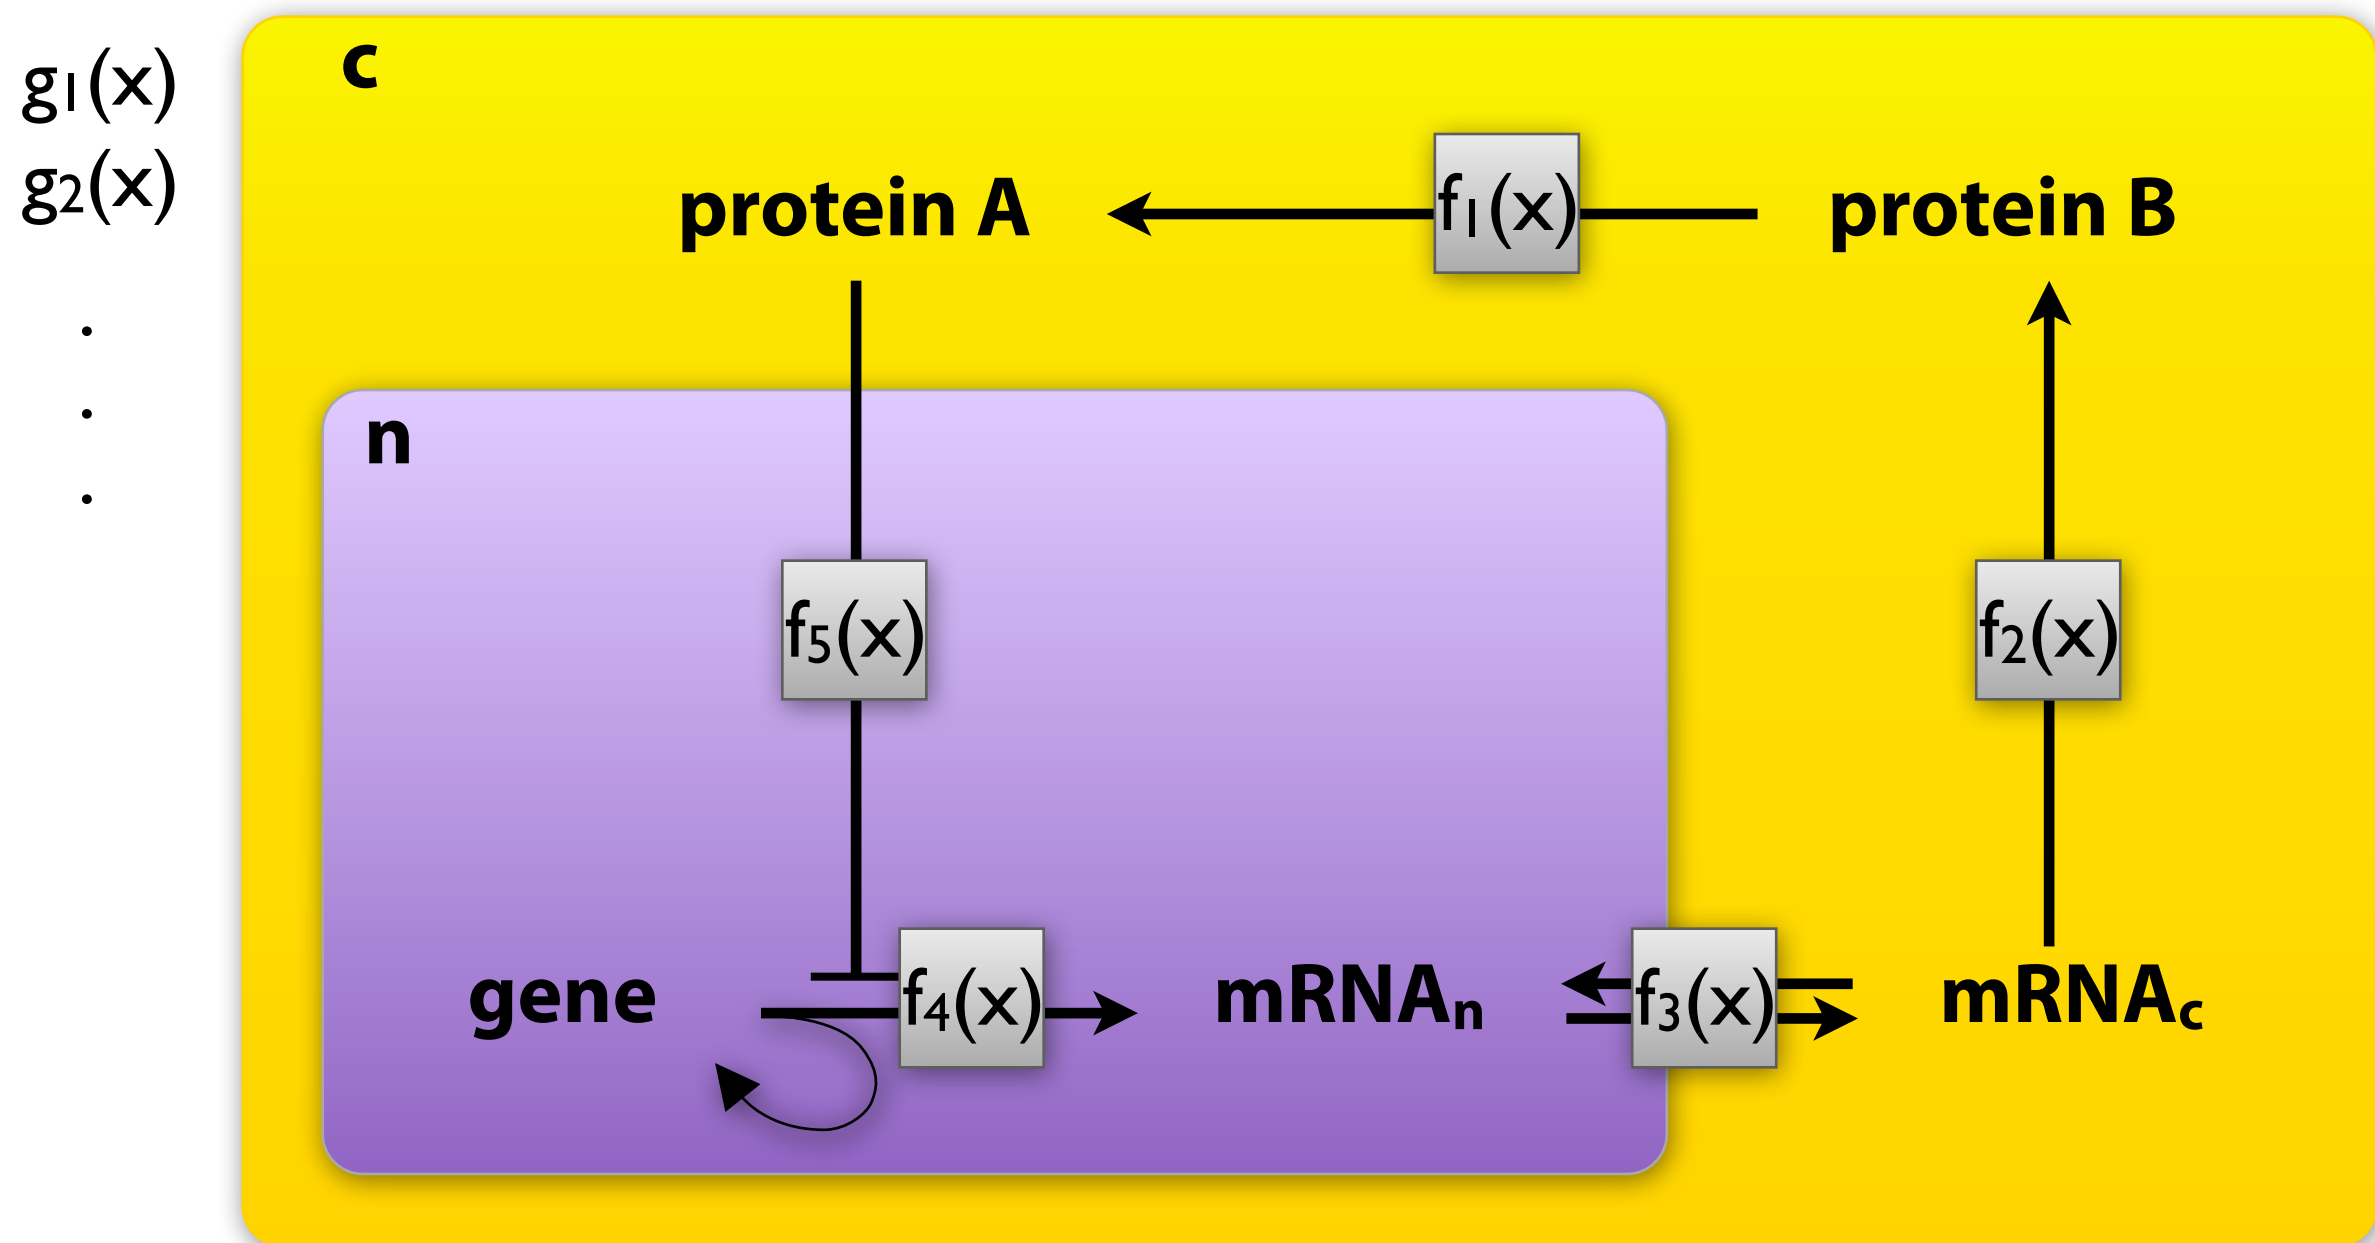

“Rules”: equations expressing relationships in addition to reaction sys.

$g_1(x)$   
 $g_2(x)$

·  
·  
·

“Events”: discontinuous actions triggered by system conditions

Event<sub>1</sub>: when (...condition...), Event<sub>2</sub>: when (...condition...), ...  
do (...assignments...) do (...assignments...)

Annotations: machine-readable semantics and links to other resources

Many types of models can be encoded just using core SBML features

- Metabolic network models
- Signaling pathway models
- Conductance-based models
- Neural models
- Pharmacokinetic/dynamics models
- Infectious diseases

SBML Level 3 *packages* extend the core to support other types

- E.g.: Spatially inhomogeneous models, also qualitative/logical

**Scope of SBML encompasses many types of models**

Closing

# SBML Files

Format: text (technically UTF-8)

Extension: usually **.xml** (not .sbml)

Does **not** store experimental data, or simulation descriptions

- But software may write proprietary metadata (annotations) in SBML

Applications usually have their own native format

- Import/export SBML

Models exist in different “Levels and Versions” of SBML

- Indicated at top of file

# SBML identifiers and names

Most elements have both an “id” and a “name” field

- Identifier field has restricted syntax: **abc123** or **\_abc123**, etc.
  - This “id” field value is what you use in expressions
- Value of “name” field is almost completely unrestricted
  - Names with spaces, **\$tr@nge** and **Funny** characters!
- **Must assign a value to “id”**, but “name” is optional

Some tools let you use the names and ignore id’s (e.g., COPASI)—they generate the id’s automatically

- But some (especially those w/ script language features) expose id’s

# SBML “rules”

“Rules” in SBML define extra mathematical expressions

- E.g.: if need to express additional mathematical relationships beyond what is implied by the system of reactions

3 subtypes:

Rule type	General form	Example
algebraic	$0 = f(\mathbf{W})$	$0 = S1 + S2$
assignment	$x = f(\mathbf{V})$	$x = y + z$
rate	$dx/dt = f(\mathbf{W})$	$dS/dt = 10.5$

Rules define relationships that hold at all times

$$dS_1/dt = r_1 + r_2 + r_3 + \dots$$

$$dS_2/dt = -r_1 + r_5 + \dots$$

...

$$0 = f_1(\mathbf{W})$$

$$0 = f_2(\mathbf{W})$$

...

$$x = g_1(\mathbf{W})$$

$$y = g_2(\mathbf{W})$$

...

$$dm/dt = h_1(\mathbf{W})$$

$$dq/dt = h_2(\mathbf{W})$$

...

**Rules in the context of the overall model**

Equations derived  
from reaction  
definitions

$$dS_1/dt = r_1 + r_2 + r_3 + \dots$$

$$dS_2/dt = -r_1 + r_5 + \dots$$

# SBML supports two annotation schemes

## **SBO** (Systems Biology Ontology)

- For mathematical semantics
- One SBML object  $\leftarrow$  one SBO term
- Short, compact, tightly coupled but limited scope

## **MIRIAM** (Minimum Information Requested In the Annotation of Models)

- For any kind of annotation
- One SBML object  $\leftarrow$  multiple MIRIAM annotations
- Larger, more free-form, wider scope

Both are **externalized** and **independent of SBML**

# Evolution of SBML continues

Today: SBML Level 3

- Level 3 Core provides framework for common models
- Level 3 *packages* add additional constructs to the Core

Level 3 package	What it enables	Status
Hierarchical model composition	Models containing submodels	✓
Flux balance constraints	Constraint-based models	✓
Qualitative models	Petri net models, Boolean models	✓
Graph layout	Diagrams of models	✓
Multicomponent/state species	Entities w/ structure; also rule-based models	draft
Spatial	Nonhomogeneous spatial models	draft
Graph rendering	Diagrams of models	draft
Groups	Arbitrary grouping of components	draft
Distributions	Numerical values as statistical distributions	in dev
Arrays & sets	Arrays or sets of entities	in dev
Dynamic structures	Creation & destruction of components	in dev
Annotations	Richer annotation syntax	

# SBML Level 3 Qualitative models (released)

Some models use a **discrete logical formalism** – e.g., Boolean net, Petri

- Often because there is not enough data for a *quantitative* model

SBML species are quantities, **not states or levels**

- Yes, you could ignore that, but...

SBML Level 3 *Qualitative Models* package provides proper support

- Adds data structures for:
  - **Qualitative species**, with assume discrete values (e.g., 0 or 1)
  - **Transitions**, with inputs, outputs and function terms
    - ▶ At each time step in a simulation, all function terms evaluated
    - ▶ Terms evaluating to *true* dictate resulting state changes

Supported in GINsim, CellNOpt, Cell Collective

# New table & status pages for package *specifications*

Documents/Specifications - SBML.org

<http://sbml.org/Documents/Specifications>

At this time, only *Version 1 Core* of SBML Level 3 has been released. Definitions of packages to go with Version 1 Core are expected in the very near future. When the specifications become available, they will be listed below. For now, you can find information about the ongoing activities in the [community wiki](#).

[[edit](#)] **SBML Level 3 Version 1 Core**

The most recent release of SBML Level 3 Version 1 Core is **Release 1**.

**The Systems Biology Markup Language (SBML): Language Specification for Level 3 Version 1 Core**

Authors: Michael Hucka, Frank Bergmann, Stefan Hoops, Sarah Keating, Sven Sahle, James Schaff, Lucian Smith, and Darren Wilkinson

*This is the final **Release 1** specification of 6 Oct. 2010.*

*The document link refers to the file on SourceForge.net. If you have any problems accessing the PDF file from there, a backup copy of the document is also available **locally from this server**.*

Specification → 

Errata → 

Submit issue → 

Schemas → 

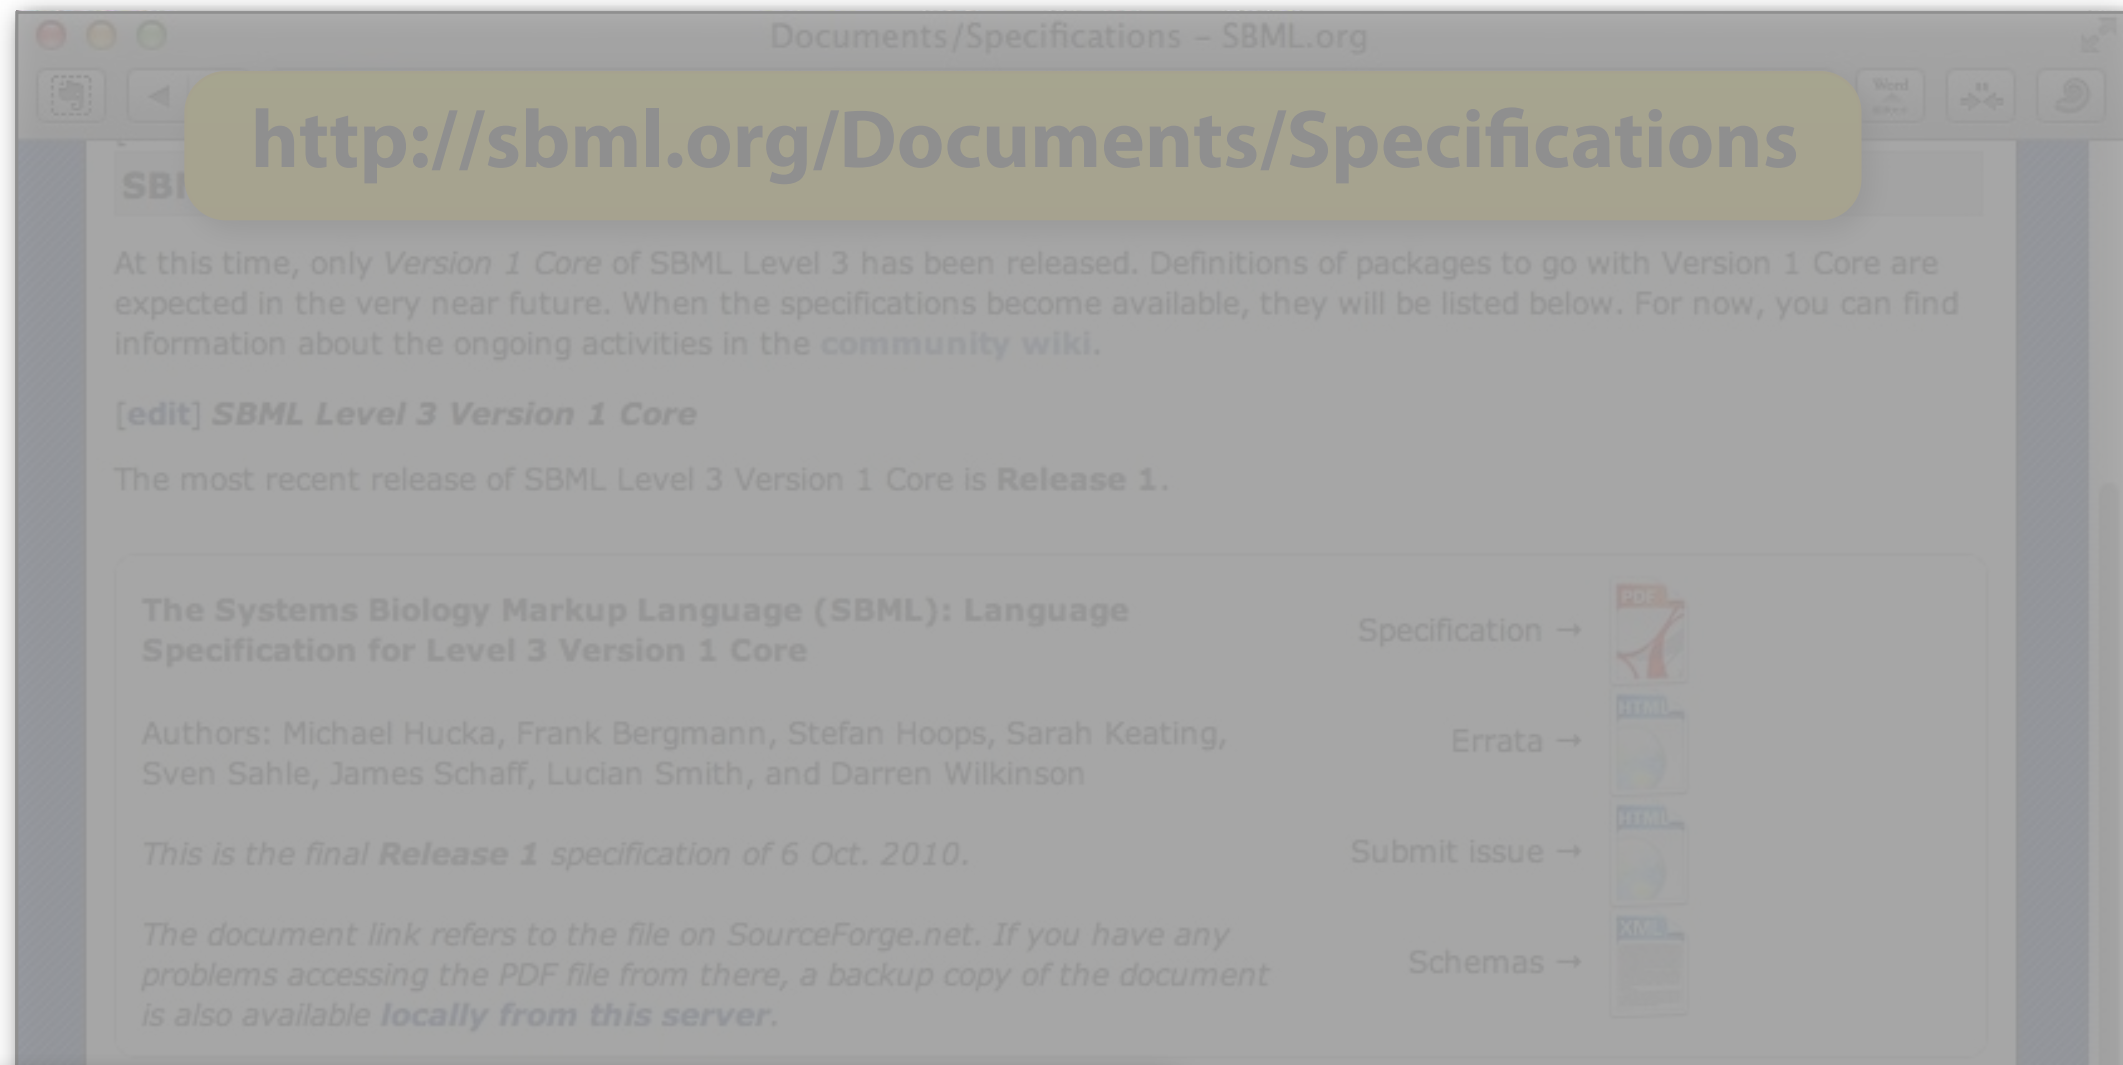

Issues with the specification are tracked on the *issue tracker* whose link is indicated above. Accepted issues are periodically collected and listed on the *Errata* page indicated above. Once a general consensus emerges that the known errata warrant a new release of the SBML specification, a new *Release* is made.

[[edit](#)] **SBML Level 3 Packages**

Each individual SBML Level 3 package effort has an associated status page. Please follow the relevant links in the table below to find out more about a given package, including any draft specifications that may be available.

Package Name	Label	Description	Specification information page	Status
Arrays and Sets	<b>arrays</b>	Support for expressing arrays or sets of things	<a href="#">Arrays and Sets</a>	
Annotations	<b>annot</b>	Support for richer annotation syntax than the regular annotations in SBML Level 3 Core	<a href="#">Annotations</a>	
Hierarchical			<a href="#">Hierarchical</a>

# The Online SBML Validator

The screenshot shows a web browser window with the title "Online SBML Validator" and the URL "sbml.org/Facilities/Validator/". The page features the SBML.org logo and the text "The Systems Biology Markup Language". A navigation bar includes links for News, Documents, Downloads, Forums, Facilities (highlighted), Community, Events, and About, along with a Google Site Search box. The main content area explains the validator's purpose: testing the syntax and internal consistency of SBML files. It includes a "Sign in or Register" link and a form to retrieve previous validation results using a key. Below this, there are three tabs: "Upload File", "Submit URL", and "Paste SBML". The "Upload File" tab is active, showing a "Browse" button and a "Clear Queue" button. A "Validate now" button and a "Schedule for Validation" button are also present. At the bottom, there are "Validation options" with checkboxes for various checks, including consistency of measurement units, correctness of identifiers, syntax of MathML expressions, validity of SBO identifiers, static analysis of model determinacy, and additional checks for recommended good modeling practices.

News Documents Downloads Forums Facilities Community Events About

Google Site Search...

Welcome to the portal for the **Systems Biology Markup Language (SBML)**, a free and open interchange format for computer models of biological processes. SBML is useful for models of metabolism, cell signaling, and more. It has been in development by an international community since the year 2000.

**For the curious**  
What is SBML? Read our [introduction](#), then perhaps browse the [mailing lists](#) to glimpse what's happening with SBML today.

**For modelers**  
Looking for software that supports SBML? Our [software guide](#) lists over **220** systems. Are you instead looking for models? Visit [BioModels Database](#), where you can find hundreds!

**For software developers**  
Interested in supporting SBML in your software? Read our [basic introduction](#) and then the [SBML specifications](#) to understand how to use SBML. After that, you may want to look at [libSBML](#).

No matter how you use SBML, we invite you to sign up for news updates either through our [RSS feed](#), our [Twitter feed](#), or one of the [mailing lists](#), and get involved with [community efforts](#) to help keep improving SBML. You can also call attention to your project's support of SBML by displaying the [SBML logo](#).

SBML would not have been possible without support from [multiple agencies and organizations](#), as well as intellectual contributions from many motivated individuals, including the [major contributors](#) who are shaping SBML Level 3.

**SBML News**

**COMBINE 2011**  
(14 Jun. '11) Registration is now open for [COMBINE 2011](#), being held in Heidelberg, DE, on Sep. 3-7.

**SBML Test Suite updated**  
(6 Jun. '11) Changes include addition of SBML L3v1 Core test cases, SED-ML files, and updates to the online interface.

[Older news ...](#)

News Documents Downloads Forums Facilities Community Events About

Welcome to the portal for the **Systems Biology Markup Language (SBML)**, a free and open interchange format for computer models of biological processes. SBML is useful for models of metabolism, cell signaling, and more. It has been in development by an international community of scientists.

**For the curious**  
What is SBML? Read our [introduction](#) and [mailing lists](#) to glimpse what's happening with SBML today.

**For modelers**  
Looking for software that supports SBML? Our [software guide](#) lists over **220** systems. Are you instead looking for models? Visit [BioModels Database](#), where you can find hundreds!

**For software developers**  
Interested in supporting SBML in your software? Read our [basic introduction](#) and then the [SBML specifications](#) to understand how to use SBML. After that, you may want to look at [libSBML](#).

No matter how you use SBML, we invite you to sign up for news updates either through our [RSS feed](#), our [Twitter feed](#), or one of the [mailing lists](#), and get involved with [community efforts](#) to help keep improving SBML. You can also call attention to your project's support of SBML by displaying the [SBML logo](#).

SBML would not have been possible without support from [multiple agencies and organizations](#), as well as intellectual contributions from many motivated individuals, including the [major contributors](#) who are shaping SBML Level 3.

**SBML News**

**COMBINE 2011**  
(4 Jun. '11) Registration is now open for [COMBINE 2011](#), being held in Heidelberg, DE, on Sep. 17.

**SBML Test Suite updated**  
(6 Jun. '11) Changes include addition of SBML L3v1 Core test cases, SED-ML files, and updates to the online interface.

**Older news ...**

**Community News**

**PRISM 4.0 released**  
(3 Jul. '11) [PRISM](#) 4.0 is a probabilistic model checker that supports SBML input.

**MatCont 4.1 supports SBML**  
(29 Jun. '11) [MatCont](#) is a MATLAB package for studying parameterized continuous and discrete dynamical systems.

## SBML Software Guide

The following pages describe SBML-compatible software packages known to us. We offer different ways of viewing the information, all drawn from the same underlying data collected from the systems' developers via our [software survey](#). The *Matrix* provides a table listing all known software and a variety of their features; the *Summary* provides general descriptions of most of the software; and the *Showcase* provides a sequential slideshow of a subset of the software.

Number of software packages listed in the matrix today: **229**.

### Go to the SBML Software Matrix

### Go to the SBML Software Summary

### Go to the SBML Software Showcase

Please [use the survey form](#) to notify us about additions and suggestions.

### [edit] Historical trend

The following graph shows the total number of known SBML-compatible software packages each year, as counted by the SBML Team. The counts shown are for approximately the middle of each year.

300

200

# libSBML

Reads, writes, validates SBML

Can check & convert units

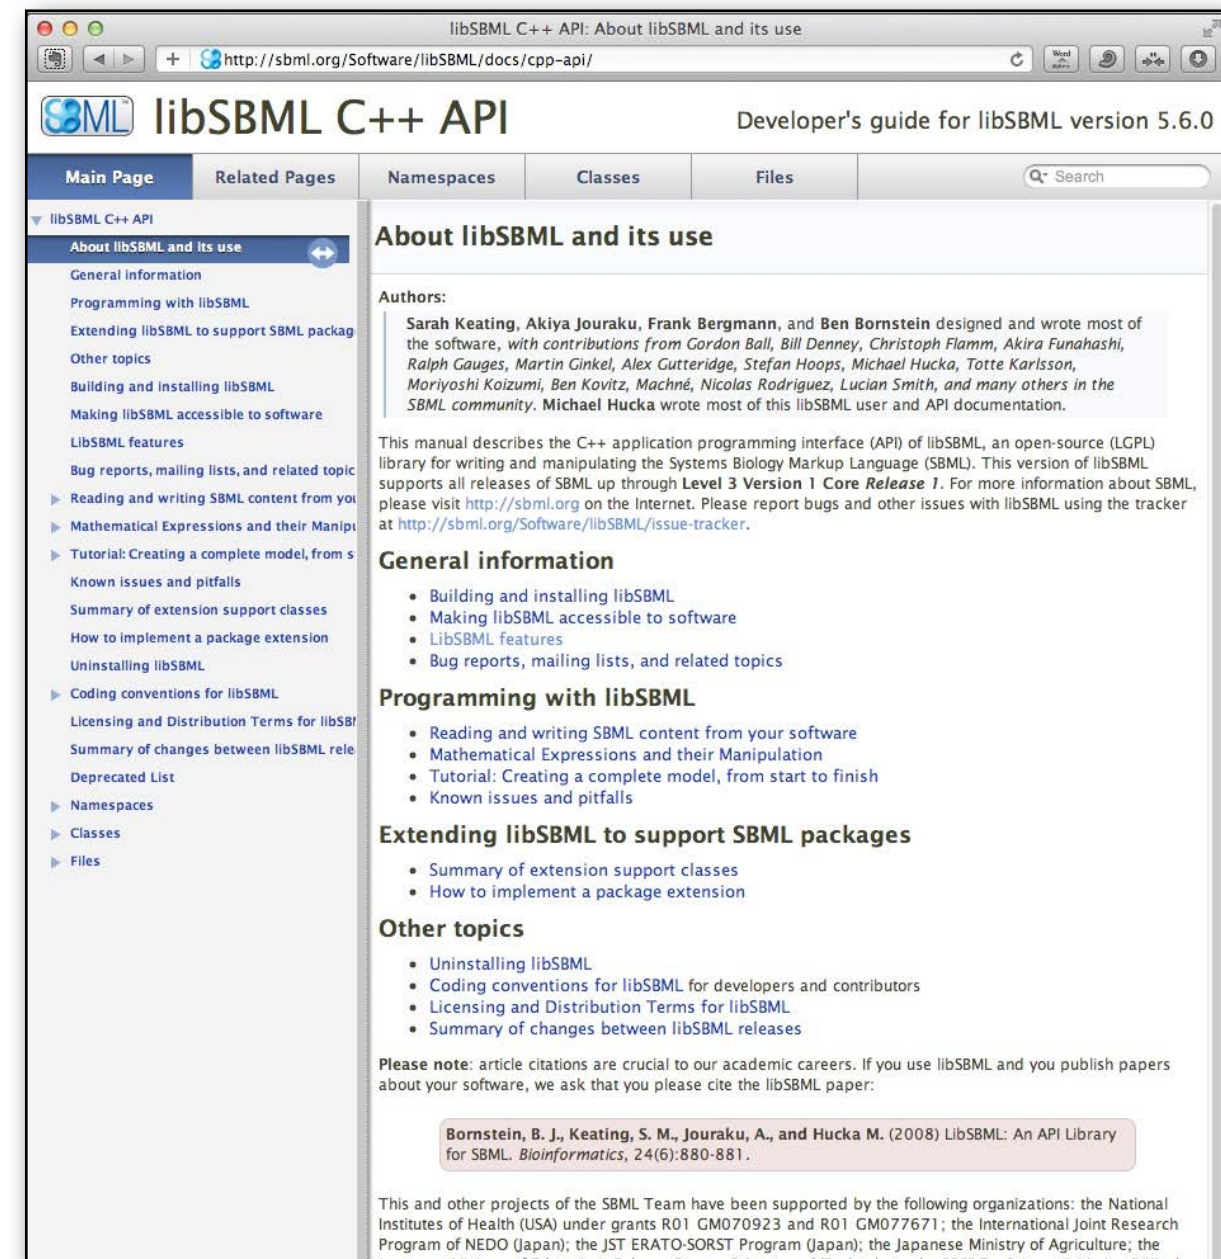

Written in portable C++

Runs on Linux, Mac, Windows

APIs for C, C++, C#, Java, Octave,  
Perl, Python, R, Ruby, MATLAB

Well documented API

Open-source (LGPL)

<http://sbml.org/Software/libSBML>

# JSBML

Pure Java implementation

API is compatible with libSBML but more Java-like

Functionality is subset of libSBML

Open source (LGPL)

## User Guide for JSBML

SBML (the Systems Biology Markup Language) is an XML-based format for storing and exchanging computational descriptions of biological processes. To read, write, manipulate, and perform higher-level operations on SBML files and data streams, software applications need to map SBML entities to suitable software objects. JSBML provides a pure Java library for this purpose. It supports all Levels and Versions of SBML, and provides many powerful features, including facilities to help migrate from the use of libSBML (a popular library for SBML that is not written in Java).

This document provides an introduction to JSBML and its use. It is aimed at both developers writing new Java-based applications as well as those who want to adapt libSBML-based applications to using JSBML. This user guide is a companion to the JSBML API documentation.

The JSBML home page is <http://sbml.org/Software/JSBML/>.

# What is the SBML Test Suite?

System for testing SBML support in software

- Currently aimed at simulators (easiest to assess)
- Extensible architecture—easy to add more test cases

Components:

- Test models + simulation run parameters + expected results
  - Each case is labeled with tags that indicate tested features
- Online assessment system
- Standalone test runner – run an application through all tests
- Online database of test results
